(54) **Title**: METHODS AND APPARATUS RELATED TO BILLING AND ACCOUNTING TO ESTABLISH ASSET VALUE

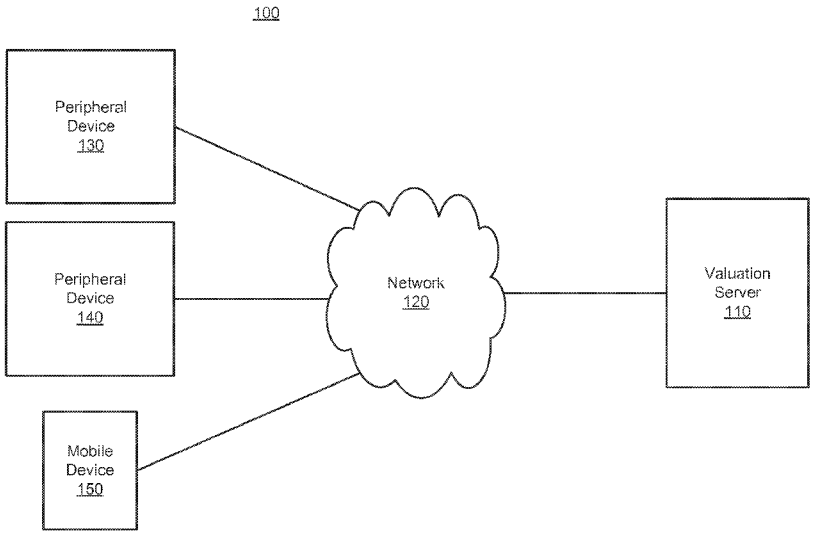

FIG. 1

(57) **Abstract**: A non-transitory processor-readable medium includes code to cause a processor to receive a signal associated with a quantity of an asset at a first time, having a value of an underlying index at the first time. The processor executes code to re-index the underlying index at the first time to a predetermined value to produce a re-indexed value at the first time. The processor executes code to calculate a value of the asset at a second time, after the first time, based at least in part on the re-indexed value at the second time and an adjustment value. The adjustment value based on the re-indexed value at the first time, the re-indexed value at the second time, and a multiplier. The processor executes code to send, to a requesting entity, the value of the asset at the second time.
