

ABSTRACT

A method and a device for acquiring and processing error address information are provided. The method includes: in response to detecting a data read operation in a user interaction interface, reading target test data of a target test object, which includes error
5 address test data corresponding to a specified address range in error address test data of the target test object; based on the target test data, displaying a first-type view in a view window of the user interaction interface, the first-type view indicates test result information of different addresses in the specified address range; and in response to detecting a view switching operation in the user interaction interface, displaying a second-type view in the
10 view window of the user interaction interface based on the target test data, the second-type view indicates location distribution information of an error address in the specified address range on the target test object.
