

TRAINING METHOD FOR TEXT COMBINATION DETERMINING MODEL AND TEXT COMBINATION DETERMINING METHOD

ABSTRACT

Implementations of the present specification disclose a training method and apparatus for a
5 text combination determining model, a storage medium, and an electronic device. In the present
specification, at least one positive sample set that cannot be combined and a negative sample set
that can be combined are constructed, and the text combination determining model is trained based
on the at least one positive sample set and the at least one negative sample set, until the text
combination determining model converges, so that the text combination determining model can be
10 used in a task of determining whether to combine the two texts.
