ABSTRACT

A front-loading washing machine according to the present disclosure includes: a main body housing (1), a water tub (11) supported in the main body housing (1) in a swingable manner, a rotary drum (10) which is rotationally provided in the water tub (11); and a detergent dispenser which supplies detergent to the water tub (11) or the rotary drum (10). The detergent dispenser includes: a detergent holder in which detergent is put; a first flow path connected to the detergent holder and including a reservoir (42) in which liquid is stored, a second path which communicates with the first flow path at downstream of and above the reservoir (42), and is connected to the water tub (11); and a third flow path which communicates with the first flow path at downstream of and above an opening of the second flow path, and with an interior of the rotary drum (10).
