

PRINTER SYSTEM FOR PRINTING CIRCUIT PATTERNS OR LIKE
ON BASE BOARD

ABSTRACT OF THE DISCLOSURE

5 A printer system for printing a given pattern
on a base board is described which comprises a
screen plate to be positioned above the base
board. The screen plate has a perforated print
pattern defined thereby. A printer proper is
employed which includes an ink container chamber
10 and an ink squeezing device. The ink squeezing
device runs on the screen plate pressing the same
against the base board while squeezing a given
amount of viscous ink onto an upper surface of
the screen plate. A cleaning device is employed
15 for cleaning residual of ink left on an lower
surface of the screen plate and an ink supplier
is employed for feeding the ink container chamber
of the printer proper with a fresh viscous ink
when needed.
