

【ABSTRACT】

The disclosure relates to a method for providing a scraping-based service. The method for providing a scraping-based service includes: requesting and receiving at
5 least one of scraping rule information defining a series of tasks for obtaining external data; collecting the external data by executing tasks according to the received rule information; and providing service information to a user using the collected external data. According to the disclosure, by providing a
10 scraping service through a client terminal and a remote server in a distributed manner, it is possible to increase efficiency of a scraping task and actively cope with changes in a scraping target.
