

ABSTRACT

The present disclosure relates to the technical field of communications, and relates to a beam failure reporting method and apparatus, and a storage medium. The method comprises: a terminal determines that beam failure occurs to a target secondary serving cell in n accessed secondary serving cells, n being a positive integer; and the terminal sends first MAC CE signaling to a base station, the first MAC CE signaling comprising beam failure indication information. Embodiments of the present disclosure provide a reporting scheme of a terminal when beam failure occurs to a secondary serving cell, thereby implementing reporting of a beam failure situation of the secondary serving cell.
