ABSTRACT

A compound represented by the following formula (I), or salt thereof exhibits excellent CRF receptor antagonism, and sufficient pharmacological activity, safety and pharmacokinetic properties as a drug.

wherein R^1 represents the formula $-A^{11}-A^{12}$; R^2 represents tetrahydrofurylmethyl, tetrahydropyranylmethyl or tetrahydropyranyl; A^{11} represents a single bond, methylene or 1,2-ethylene; A^{12} represents C1-6 alkyl, C3-6 cycloalkyl or C3-6 cycloalkyl having methyl; R^3 represents methoxy, cyano, cyclobutyloxymethyl, methoxymethyl or ethoxymethyl; and R^4 represents methoxy or chlorine.
