

Case 8361(2)

ABSTRACT

TWO-STROKE ENGINE OILS

This invention relates to a two-stroke engine oil which comprises polybutene base oils which are either very low in or are substantially free of n-butenes in the polymer backbone. The absence of n-butenes in the polybutenes significantly reduces smoke emission in exhaust gases generated by the use of the engine oil. Polybutenes such as ULTRAVIS® which are substantially free of chlorine and have a high degree of terminal unsaturation are particularly preferred.
