ABSTRACT

TREATMENT OF CANCER USING HUMANIZED ANTI-CD19 CHIMERIC ANTIGEN RECEPTOR

The disclosure provides compositions and methods for treating diseases associated with expression of CD19. The disclosure also relates to chimeric antigen receptor (CAR) specific to CD19, vectors encoding the same, and recombinant T cells comprising the CD19 CAR. The disclosure also includes methods of administering a genetically modified T cell expressing a CAR that comprises a CD19 binding domain.
