

TITLE OF INVENTION: CHEMICAL SAMPLING DEVICE

ABSTRACT

[Abstract] An embodiment disposes a chemical sampling device,
5 including a lid detachable unit that separates a lid of a container; and a chemical
charging unit that charges chemicals in the container, wherein the chemical
charging unit includes a drain module from which residual chemicals remaining
in a plurality of sampling lines is discharged; and a plurality of sampling driving
modules each independently moving the plurality of sampling lines, wherein the
10 plurality of sampling driving modules moves the plurality of sampling lines to an
upper portion of the drain module or the container.
