

ABSTRACT

A face mask storage clip, comprising an L-shaped main body (100) when unfolded, wherein the L-shaped main body (100) can be folded along a first extension line (110) of an L-shaped horizontal inner edge for the first time when in use, and then folded along a preset straight line (111) passing through the L-shaped main body (100) in this case for a second time, the preset straight line (111) being perpendicular to the horizontal inner edge. When the surface of the L-shaped main body (100) is coated with a silver ion antibacterial coating, the face mask storage clip has antibacterial properties, such that the disinfection burden on a user is reduced; the face mask storage clip is simple to manufacture, convenient to use and easy to carry; and the face mask storage clip is multifunctional and can reduce waste by means of improving the use efficiency.
