

TILTABLE TABLE WITH PINCH PREVENTION CAPABILITY

ABSTRACT OF THE DISCLOSURE

A tiltable table comprises: a table stand (2); a tabletop (4) pivoted to the table stand (2); and a pinch-preventing unit (6) having engaging holes (414) formed in one of the tabletop (4) and the table stand (2), engaging studs (61) secured to the other of the tabletop (4) and the table stand (2), and a releasing lever (63) having through-holes (601). The through-holes (601) are respectively aligned with the engaging studs and holes (61, 414) in a vertical direction (Y) when the releasing lever (63) is at a first position and when the tabletop (4) is at a tilting position. The through-holes (601) are misaligned with the engaging studs and holes (61, 414) in the vertical direction (Y) and the engaging studs (61) abut against the releasing lever (63) when the releasing lever (63) is at a second position and when the tabletop (4) is at the tilting position.
