

FIG. 1

## (A) Transition metal component

- (a) Dialkoxymagnesium ———— Contact
- (b) Tetra-valent titanium halide ———— Contact
- (c) Phthalic acid diester ————

## (B) Organoaluminum component

$$0 < p \leq 3,$$

(C<sup>1</sup>) Halogen-containing organosilicon compound 1

$$1 \leq l+m \leq 3$$

(C<sup>2</sup>) Halogen-containing organosilicon compound 2

$$1 \leq q \leq 3$$

Olefin
