

[Document Name] Abstract

[Abstract]

[Object]

5 The present invention provides an improved encapsulated
pancreatic islet.

[Method for Achieving the Object]

10 A formulation comprising a core covered with a five-
layered membrane, wherein the core comprises one or more
pancreatic islets; and the first, third, and fifth membranes from
the inner side of the five-layered membrane contain alginic acid,
and the second and fourth membranes from the inner side contain
polyornithine.
