(54) Title: METHOD, APPARATUS, AND SYSTEM FOR UPLINK CONTROL INFORMATION RETRANSMISSION

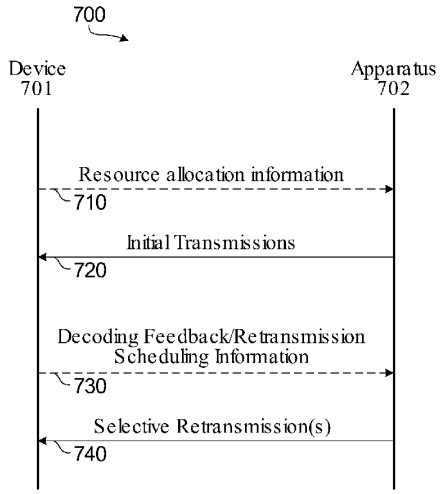

FIG. 8

(57) Abstract: Aspects of the present disclosure provide methods, apparatuses, devices and systems for facilitating communications between an apparatus and a device in a wireless network, in order to overcome the limitations of existing uplink control information (UCI) retransmission schemes, reduce processing overhead, and enhance resource utilization and reliability. According to implementations, an apparatus may selectively re-transmit, to a device, one or more code blocks of a first information channel. The code blocks may include first information for managing communication involving the apparatus and/or the device. The selective retransmission may be based on payload type and/or priority index of the code blocks.
