

ABSTRACT (FIG. 10)

"ELEVATOR"

According to one embodiment, an elevator (10) includes a modesty panel (30) provided in a car (12), a  
5 camera (36) and a fixing member (48). The modesty panel (30) is provided at an upper portion of a door apparatus, and includes a window portion (58). The camera (36) is set above the window portion (58), and has an angle of view to perform an imaging operation in  
10 a range from an inside of the car (12) to the hall (14). The fixing member (48) fixes the camera (36). The door apparatus is a one-way door. The camera (36) is located closer to a doorstep for the door apparatus than to a center portion of the modesty panel (30) in a  
15 width direction thereof, and is separated from the doorstep in a direction in which the door apparatus is opened.
