

ABSTRACT

A role removal method, apparatus and system for an emulator game are provided. The method includes: when it is determined that there is a role to be removed from the emulator game, saving current game running information; calling a role removal function to remove the role to be removed; and loading the saved current game running information, so as to continue running the emulator game. The embodiment of the disclosure can modify stack data, a program pointer and the like of a game program by saving the current game running information and calling the role removal function, so as to achieve the purpose of controlling the game execution procedure. In particular, it can be guaranteed that a game player can exit the game at any time, and meanwhile the remaining game players can continue their games without being influenced.
