(54) **Title:** MOBILE SOLUTION FOR SIGNING AND RETAINING THIRD-PARTY DOCUMENTS

**Fig. 1**

(57) **Abstract:** Techniques for signer-initiated electronic document signing via an electronic signature service using a mobile or other client device are described. Example embodiments provide an electronic signature service ("ESS") configured to facilitate the creation, storage, and management of documents and corresponding electronic signatures. In some embodiments, when a signer user receives an electronic signature document on a mobile device, the signer may use a client module executing on the mobile device to import the document into the ESS. Once the document is imported into the ESS, the signer can access, review, and sign the document at the ESS via the mobile device. After signing the document, the signer can use the mobile device to cause the ESS to provide the signed document to one or more recipients.
