

COMMUNICATION CONTROL DEVICE, STORAGE DEVICE,
COMMUNICATION CONTROL DETERMINATION DEVICE, AND SERVER
DEVICE

5

ABSTRACT

[Object] To provide a communication control device capable of allowing coexistence of communication nodes in any implementation.

[Solution] Provided is the communication control device including: a
10 transmission unit configured to transmit an acquisition request of connection
information to a storage device storing the connection information for connection to
a communication control determination device that controls coexistence of a plurality
of wireless systems; an acquisition unit configured to acquire a response including
the connection information from the storage device; and a control unit configured to
15 select, on a basis of at least one reference, a communication control determination
device from the connection information received from the storage device. The
reference relates to information necessary for communication control for the
coexistence.
