(54) Title: SURFACE COVERING SYSTEM AND METHOD FOR PRODUCING SUCH A SYSTEM

Fig.1d

(57) Abstract: The invention relates to a surface covering system intended for a surface in the form of a wet room floor, a roof or another substantially flat, delimited surface which is exposed to water and needs drainage, and to methods for preparing such a system. The surface covering system comprises at least one plate (1, 1a, 1b, 1c) with a mark (2) showing a drainage point and a substantially flat lower surface (3) and an upper surface (4) with a first decline towards the mark (2). The invention is characterised by that the first decline is circular and has a radial slope (a) directed towards the mark (2) from every point on the at least one plate (1, 1a, 1b, 1c). In this way the decline creates a cavity in the plate (1, 1a, 1b, 1c) in the shape of at least a part of a blunt virtual cone with the apex of the cone directed towards the mark (2). This solution achieves a modular surface covering system with an even circular decline, starting from the placement of the drainage point/points in a specific limited space. The invention further relates to a method for preparing such a surface covering system.
