(54) Title: PACKAGING

(57) Abstract: A package (10) is disclosed which is adapted to receive and protect goods, such as for example electronic components (16). The package has a body which includes a translucent window (14) formed from a flexible laminated sheet material. A first layer (40) of said laminated sheet material comprises an environmental protection ply (30) including an inorganic oxide (SiO₂) deposited onto a first carrier ply and a second layer (42) of said flexible sheet material comprises an electrical protection ply (32) including an electrically conductive material AI deposited onto a second carrier ply. The first and second carrier plies are laminated together in a back-to-back relationship and at least one and preferably both said protection plies (40), (42) has a heat-sealable outer ply (20) laminated thereto. In this manner, a package (10) according to the present invention provides at least a portion thereof comprising a translucent flexible sheet which is adapted for use as a window (14; 140).
