

ABSTRACT

The embodiments of the disclosure provide a game state detection and configuration updating method and apparatus, a device and a storage medium. The method includes that: description information of multiple configuration files of a first game table is acquired from a cloud; first description information is determined from the description information of the multiple configuration files, the version of a first configuration file described by the first description information being higher than that of a first local configuration file of the corresponding first game table; the first configuration file is acquired from the cloud to update the first local configuration file; and a game state of the first game table is detected according to the updated first local configuration file, as well as a first image collected for the first game table. The disclosure improves the accuracy of game state detection and the efficiency of configuration updating.
