(54) Title: SYSTEM AND METHOD FOR BALANCING INFORMATION LOADS

(57) Abstract: A method and system is provided for routing data in a system. The method includes determining an initial fixed distribution pattern, determining a queue parameter based on at least a current amount of system use and a maximum potential system use, determining a time parameter based on the time that a message in the application has been waiting for its processing, determining a load parameter based on at least the time parameter and the queue parameter, and modifying the distribution pattern based on at least the load parameter.
