(54) Title: RECOMMENDATION AND IMPLEMENTATION SYSTEMS AND METHODS FOR EDGE COMPUTING

(57) Abstract: In examples, systems and methods are described for edge computing recommendations and implementation. A service request is received from a client computing device that includes information about a location of a customer site and latency requirements of the customer, among other information. The system provides recommendations for particular provider computing site(s) based on, e.g., rough and/or fine latency estimates, and implements the requested computing services at selected provider computing site(s).
