(54) Title: SERVICE APPLICATION REQUEST PROCESSING METHOD AND SYSTEM THEREOF, APPLICATION SERVER

(54) 发明名称: 业务应用请求处理方法及系统、应用服务器

图 1 / Fig. 1

(57) Abstract: A service application request processing method is disclosed in the present invention, which includes: receiving a service application request sent by a soft switching device and obtaining the identifier of the soft switching device (101); determining, according to a mapping relationship between the identifier of the soft switching device and an identifier of a media server, at least one media server located in the same zone with the soft switching device corresponding to the identifier of the soft switching device (102); sending the service application request to said at least one media server located in the same zone with the soft switching device corresponding to the identifier of the soft switching device (103). An application server and a service application request processing system are also disclosed in the present invention. Application of the present invention, by accurately searching the media server located in the same zone with the soft switching device, can improve realization efficiency of service application and utilization feeling and experience of a user.

- 101 receiving a service application request sent by a soft switching device and obtaining the identifier of the soft switching device
- 102 determining, according to a mapping relationship between the identifier of the soft switching device and an identifier of a media server, at least one media server located in the same zone with the soft switching device corresponding to the identifier of the soft switching device
- 103 sending the service application request to said at least one media server located in the same zone with the soft switching device corresponding to the identifier of the soft switching device
