CLAIMS

[Claim 1]

An electric blower comprising:

a fan; and

a motor configured to rotate the fan, wherein the fan is a turbofan,

the motor having:

a shaft;

a magnet part arranged to the shaft;

a spindle configured to be rotated together with the fan arranged to the shaft; and

a bearing configured to rotatably hold the shaft, wherein

a suction side of the fan is arranged in a side of the magnet part, and

the bearing is arranged inside the fan and in an opposite side of the magnet part with respect to the fan.

[Claim 2]

The electric blower according to claim 1, the electric blower comprising:

a driving circuit configured to drive the motor, wherein

the driving circuit is arranged in an upstream side of the fan.

[Claim 3]

A vacuum cleaner comprising the electric blower according to claim 1 or 2.
