(54) Title: IMAGING TEST PIECE FOR MEDIUM AND LARGE SECURITY X-RAY SCANNERS

(a)
Fig. 7

(57) Abstract: The invention provides a test device for assessing the detection capability of an X-ray system with a medium and/or large tunnel size. The device comprises a support and at least one test module mounted on the support. The device may optionally also comprise a stand which holds the support at a predetermined angle to the horizontal. The test module, or at least one of the test modules, is capable of being used in a test for an aspect of the detection capability.
