(54) Title: SYSTEM FOR BRAKING AND RECOVERING PROJECTILES, PROVIDED WITH A COLLECTING ASSEMBLY

Fig. 3

(57) Abstract: The system (10) comprises a main structure (12) in which a firing chamber (14) and a braking and recovery tank (16), adjacent to the firing chamber (14), are positioned. The firing chamber (14) is intended for housing a firearm (18) configured for firing a projectile (P) into the braking and recovery tank (16). Furthermore, the braking and recovery tank (16) is configured for containing a liquid capable of braking the projectiles (P) coming from the firing chamber (14) and fired by the firearm (18). There is a collecting assembly (36) placed in the braking and recovery tank (16) and configured for recovering the braked projectiles (P) that have fallen to the bottom of the braking and recovery tank (16). The collecting assembly (36) comprises a basket (38) configured for receiving and collecting the fallen pro j ectiles (P), and a pushing device (42) configured for pushing the fallen projectiles (P) towards the basket (38).
