(54) Title: A PERSONAL TELECOMMUNICATIONS SYSTEM

(57) Abstract

The invention relates to a personal telecommunications system based on the fixed network, in which system base station systems (BSC, BTS) provide a wireless access network for the base stations to a local exchange (LE). In accordance with the invention location management, radio ressources management, and/or handover control (VLR1F, RSCF, HOF) are concentrated in a master base station controller (BSC1) in a group of two or more base station systems, for controlling the other base station controllers (BSC2, BSC3) of the group.
