

**Title of Invention: CERAMIC HEATER AND MANUFACTURING METHOD
THEREOF**

ABSTRACT

The present invention relates to a ceramic heater with improved reliability, the
5 ceramic heater including: a heater body having a mesh type high-frequency electrode,
and an electrode rod connecting member being in contact with a lower surface of the
high-frequency electrode; and a heater support mounted on a lower portion of the heater
body and configured to support the heater body, in which the electrode rod connecting
member is in area contact with one surface of the high-frequency electrode.
