(54) Title: APPARATUS, METHOD AND SYSTEM FOR PROVIDING NEW COMMUNICATION SERVICES OVER EXISTING WIRING

FIGURE 3

(57) Abstract: The invention provides apparatus for providing a next-generation communication system over existing wiring. In one form the apparatus includes an input to receive broadband signals carrying next-generation communication data, a processor to extract the next-generation communication data from the broadband signals and a converter to convert the next-generation communication data into analogue telephone signals. The apparatus is arranged to output the analogue telephone signals at the input of the apparatus. Also described is a related method of providing a next-generation communication system over existing wiring.
