ABSTRACT

BASEBOARD WITH MOVEABLE ELECTRICAL OUTLET

Existing electrical outlet tracks require that the outlet be slid from one location to another along the track. The present invention provides a readily movable electrical receptacle which also discourages contact with the conductors. The receptacles of the present invention can be readily installed at any location along a baseboard conductor without sliding of the receptacle. This is accomplished using a T-shaped element which is inserted through the lengthwise groove of the continuous track and rotated into place. Screw-mounted bars are used to tighten the receptacle into place at the chosen location. Multiple raceways on a single baseboard, accommodating different types of receptacles, are disclosed.
