ABSTRACT

Provided are a vehicle key positioning method, an apparatus and a storage medium. The method includes: based on respective ranging signals between a plurality of positioning anchor points and a key of a vehicle, determining respective distances therebetween; if one reference anchor point is determined from the plurality of positioning anchor points based on the respective distances between the plurality of positioning anchor points and the key, correcting a distance between a positioning anchor point adjacent to the reference anchor point and the key to obtain a corrected distance; performing positioning calculation on a distance between the reference anchor point and the key, and the corrected distance to obtain final position information of the key relative to the vehicle; and executing a preset action corresponding to both the final position information of the key relative to the vehicle and a control instruction sent by the key.
