(54) Title: HIGH FREQUENCY HEATING APPARATUS WITH STEAM GENERATING FUNCTION

(57) Abstract: The object of the invention is to provide a high-frequency heating apparatus which has simple configuration, in which leakage into the apparatus from a water tank is prevented without large-sizing the apparatus, which is not influenced by heat from a heating chamber and which is sanitary and provides ease of use. To achieve the object, the high-frequency heating apparatus 100 provided with a high frequency generator that supplies a high frequency to the heating chamber for housing an object to be heated and a steam generator that generates steam in the heating chamber for supplying at least either a high frequency or steam to the heating chamber and heating the object to be heated is provided and the water tank for supplying water to the steam generator is arranged in any position on the outside face of the high-frequency heating apparatus 100 so that the water tank can be detached.
