

ABSTRACT

The present invention is aimed at providing an oral composition capable of reducing the irritant feeling resulting from an irritant agent such as an inhibitor
5 against staining on the teeth while exhibiting the original effect of the irritant agent. The present invention provides an oral composition including an ingredient (A): one or more selected from a condensed phosphoric acid, phytic acid, and salts thereof; and an ingredient (B): (N-
10 (2-(2-pyridinyl)ethyl)-2-isopropyl-5-methylcyclohexanecarboxamide); as well as an irritant reliever for an irritant ingredient in an oral composition, the irritant reliever including (N-(2-(2-pyridinyl)ethyl)-2-isopropyl-5-(methylcyclohexanecarboxamide); and an oral
15 composition including an irritant ingredient and (N-(2-(2-pyridinyl)ethyl)-2-isopropyl-5-methylcyclohexanecarboxamide).
