

GLASS-PLATE POLISHING APPARATUS AND METHOD THEREOF

ABSTRACT OF THE DISCLOSURE

A glass-plate polishing apparatus has: a plurality of abrasive disks juxtaposed each other and horizontally rotated;
5 a track support extended in a horizontal direction above the abrasive disks; a plurality of carriages traveling freely along the track support and having an upper surface plate with a vertically movable pressure plate for equipping the glass plate thereto; a plurality of transport carriers reciprocated along
10 the track support and each detachably coupled to the carriage; and a horizontally reciprocating unit reciprocating parallel with the track support and pressing the upper surface plate against the abrasive disk.
