(54) **Title: FLUID COUPLING**

Fig. 24

(57) **Abstract:** A fluid coupling (10) comprising several intravenous fluid delivery tubes (11) and a connector (15). The connector (15) is configured for attachment to an intravenous cannula or needle. The connector (15) comprises a body (20) having a first end portion (21) and a second end portion (22). The first end portion (21) comprises a plurality of sockets (23), each socket being adapted to receive an end section of a respective fluid delivery tube (11). The second end portion (22) comprises a nozzle (31) having an end face (33), wherein there is a plurality of interior flow paths (41) within the nozzle. Each flow path (41) opens onto the end of the nozzle (31) and communicates with a respective one of the sockets (23), whereby fluid delivered by each tube (11) is transported along the respective flow path (41) to the end of the nozzle (31) and the intravenous cannula or needle attached thereto. Each tube (11) has an end section thereof sealingly received in a respective socket (23).
