(54) Title: DELAY STATUS REPORTING IN PRESENCE OF SKIPPABLE RADIO RESOURCE MANAGEMENT (RRM) MEASUREMENT PERIOD

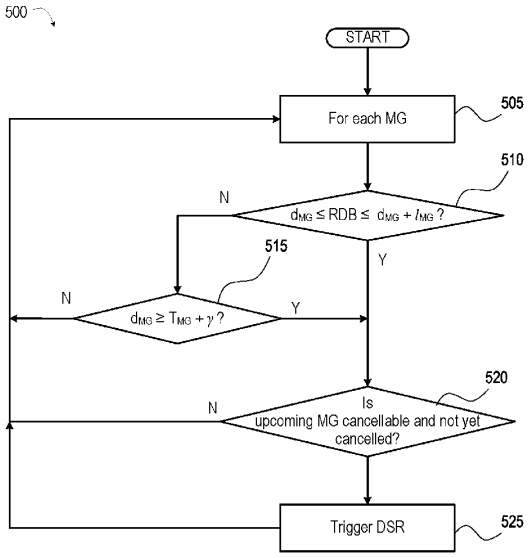

FIG.5

(57) Abstract: Various aspects of the present disclosure relate to a user equipment (UE), base station, method, and processor for wireless communication that reduces discarding of delay-critical uplink data. The UE receives, from the base station, a configuration including an indication of a dynamic delay status reporting parameter and an indication of a first uplink grant preceding a measurement period. In response to determining a time distance to the measurement period is within a dynamic reporting time window, the UE determines whether at least one data unit of delay-critical data is not accommodated by the first uplink grant and has an assigned discard time to occur during the measurement period. To avoid discarding the delay-critical data, the UE transmits delay status reporting to the base station. The UE receives a second uplink grant in response and transmits the delay-critical data according to the second uplink grant, before the assigned discard time.
