

Automatic Access Control Method and System**ABSTRACT**

Access control method in which a user is recorded and is given a first identifier, and then the user identifies themselves with the first identifier and has an automatic reading device (11) read a coded personal information medium (21, 22) bearing a second identifier, after which the user is associated with the second identifier. Subsequently, the user identifies themselves by having the automatic reading device read the personal information medium, and then a control device (15) is commanded as a function of the reading of the personal information medium.
