ABSTRACT

TRANSACTION SUPPORT DEVICE, TRANSACTION SUPPORT SYSTEM, TRANSACTION SUPPORT METHOD, AND PROGRAM

According to an embodiment, business processing related to commercial transactions is uniformly supported between a plurality of business entities such as retailers, wholesalers, and manufacturers. A transaction support device generates order information, shipping information, and receiving information, generates profit information indicating a profit of a first business entity based on cash information of the first business entity and the receiving information, generates profit information indicating a profit of a second business entity based on the shipping information of the second business entity, and outputs settlement information containing the profit information to a device of a finance company which acquires the cash sales recovered from the first business entity with respect to a transaction between the first business entity and the second business entity which is an order destination of the first business entity.
