(54) Title: CONNECTION METHODS AND SYSTEMS

FIG. 2

(57) Abstract: Various novel connectors are provided. In one embodiment, the connector includes a collar (16) configured to receive first (14) and second (12) components. In this embodiment, the connector may also include a load ring (50) configured to be received in a groove (46) of the second component and to move into and out of engagement with the collar when the second component is received by the collar. The connector of this illustrative embodiment may also include a cotter (60) configured for installation to the second component and to inhibit disengagement of the load ring and the collar effects securing of the first and second components to one another. Other devices, systems, and methods related to connectors are also disclosed.

- *as to the applicant's entitlement to claim the priority of the earlier application (Rule 4.17(iii))* — *before the expiration of the time limit for amending the claims and to be republished in the event of receipt of amendments (Rule 48.2(h))*
