

RISK PREVENTION AND CONTROL SOLUTION GENERATION METHOD, TARGET LANGUAGE MODEL TRAINING METHOD, DEVICE, AND STORAGE MEDIUM

ABSTRACT

5 This specification provides a risk prevention and control solution generation method, a target
language model training method, a device, and a storage medium. In the generation method, target
prompt information corresponding to a target event is obtained in response to detecting that a
configuring person requests to configure a risk prevention and control solution corresponding to
the target event; a target language model is instructed, based on the target prompt information, to
10 generate at least one target risk label corresponding to the target event, where the target prompt
information includes at least text information describing a risk of the target event in a natural
language; and the risk prevention and control solution is generated based on the at least one target
risk label and recommended to the configuring person.
