(54) Title: PHOTOCURABLE COMPOSITION

(57) Abstract: A photocurable composition can comprise a polymerizable material and at least one photoinitiator, wherein the polymerizable material comprises a multi-functional vinylbenzene monomer in an amount of at least 30 wt% based on the total weight of the polymerizable material and the at least one photoinitiator includes an oxime ester compound. The photocurable composition can be adapted that a UV shrinkage after forming a photo-cured layer at 23°C is not greater than 4.0 %; and that a thermal shrinkage after conducting a baking treatment of the photo-cured layer at 350°C is not greater than 3.5%.
