

A b s t r a c t :

A plastic spring (1) consists of a spring tongue (4) attached to a spring support (2) by means of a web (3).

For adapting the spring characteristic to different conditions independent of the material, the web (3) is rigidly supported with respect to the spring support (2), and at least one auxiliary spring tongue (5, 6) parallel to the spring tongue (4) extends from the web (3) below the spring tongue (4).
