(54) Title: HIGH TRANSPIRING FOOTWEAR

(57) Abstract

The high transpiring footwear of the type having an upper (11), an inner sole (12) and an outer sole (14), comprises a middle sole (15) made of a material that can absorb the aqueous vapour transpiring from the foot bottom surface and dispel it outwardly from the sides thereof and a thin strap (16) made of the same material as the upper (11) that encloses the peripheral portion of the middle sole (15) and is provided with inwardly folded edges directed towards the inner of said middle sole (15). The thin strap (16) is sewed to the middle sole (15) in order to prevent the material forming it from absorbing moisture coming from the outside, without jeopardizing its ability to dispel the aqueous vapour outwardly, while providing at the same time a soft and steady support for the foot.
