ABSTRACT

A method for indicating a transmit power includes: determining a maximum permissible transmit power of at least one uplink beam of a terminal, in which the maximum permissible transmit power is a maximum transmit power subject to satisfying a maximum permissible exposure (MPE) limit of the terminal; and transmitting first indication information for indicating the maximum permissible transmit power of the at least one uplink beam. ~~A method and apparatus for indicating sending power, a method and apparatus for determining sending power, and a terminal, a device and a medium, which belong to the technical field of communications. The method comprises: determining the maximum permissible sending power of at least one uplink beam of a terminal, wherein the maximum permissible sending power is the maximum sending power within an MPE limit of the terminal; and sending first indication information, which is used for indicating the maximum permissible sending power of the at least one uplink beam. The method is beneficial to improvement of uplink transmission performance.~~
