CASH RECEIVING SYSTEM AND CASH RECEIVING METHOD

ABSTRACT

A cash receiving system includes: a cash handling apparatus installed in each store; a store server configured to manage cash stored in the cash handling apparatus; a mobile terminal configured to input information on the cash to be withdrawn from the account of the user; a management server configured to receive the information from the mobile terminal, and transmit to the mobile terminal information on a store to receive the cash; and a financial institution server configured to receive information on the cash, and perform account handling for transferring an amount of the cash from the account of the user to an account of the store. When the store server has determined that the store has cash to be deposited into the account of the store, the management server notifies the user of information on the determination result.
