(54) Title: NOVEL PHARMACEUTICAL COMPOSITIONS HAVING AN ANTIDIABETIC ACTION, AND PROCESS FOR THEIR PREPARATION

(57) Abstract: The present invention relates to the field of therapeutic chemistry and more particularly to the preparation of novel medicinal products for treating diabetes. Specifically, a subject of the invention is novel antidiabetic medicinal products consisting of a combination of two active principles that are effective via the oral route, at subliminal doses, formed from an antidiabetic biguanide and an antidiabetic sulfonamide, in combination or as a mixture with one or more inert, pharmaceutically acceptable excipients. The invention also relates to a process for the preparation of such medicinal products formed from a biguanide and a sulfonamide.
