COMMENTS

in response to the Declaration of inability to prepare the international search report (hereinafter the Declaration)

The idea of the claimed invention is not entirely correctly understood, and apparently so incorrectly identified an area to which the invention relates, and accordingly not found the required information in the description.

The claimed invention does not relate to the field of study (proof of existence) energy-information field. Accordingly, there is no description of theoretical and experimental studies of the existence of energy-information field and information field of the person and the possibilities of its registration, etc.

Accordingly, in the description is a description of the claimed Method of operation and their relationship, as well as patent-pending components of the System, in accordance with rule 5 of the Regulations under the Patent Cooperation Treaty (PCT). Description of the concept of "harmful element" (including examples) given in the description on page 1 paragraph 4 "The harmful elements is ...".

The term "energy-information field" is used to make clear that patented Method and System can be applied to harmful elements are not only in or on an object, but in the immediate vicinity from them, including through the use of devices for the energy impact on the biological object - Patent of the Russian Federation № 2074748, in description of which is referred the energy bio-object field, patented method for evaluating the effectiveness of the device, which reliably to evaluate the impact on biological object impacting energy factors.

The ideas of the existence of energy-information fields are in the patent of the Russian Federation № 2164424 of 27.03.2001 "Device for carrying out the method of low-frequency electromagnetic therapy", which is also part of the patent-pending System, and which is used in the patented Method. The nature of the existence of this field is explained in the description of the patent in terms of physics.

Thus, I do not agree with the 11-th of the 12 presented in the Declaration bases. The reasons for disagreement reflected in column 5 tables on the next page for each of the bases.

On the single base ("The description is not given any concrete example of embodiment of the claimed invention") describes in Example execution in table on the next page in item 9.

Appendix: Table with explanation of the reasons of disagreement author on the 6 sheets.

Number	Paragraph of Declaration	Grounds for the decision	The consent of the author	Explanation of disagreement
1	2	3	4	5
1	4	The claimed invention is based on the idea of getting rid of harmful objects elements	No fully	It should be added before the phrase "getting rid of objects from harmful elements" - the phrase "rapid detection of harmful elements (their waste products) and". The phrase explicitly added to the claims.
2		Restoration of the natural state of an object living or inanimate nature	No	The claimed invention is based on the idea, mentioned in item 1 above. This is precisely the result of the ideas set out in item 1 above.
3		using, in particular bio-resonance therapy	No fully	The word "in particular" should be replaced by the word "mainly" because the main method of removing harmful elements is all the same bioresonance method. Other described methods can be used together or displacing said bio-resonance method in any part.
4		as well as on the idea of the existence of "energy-field"	No	The patented Method and System not relevant to question of research of this idea. The term "energy-information field" is used to make clear that patented Method and System can be applied to harmful elements which are not only in or on an object, but in the immediate vicinity from them. In the description on page 15 paragraph 2 provides information on the practical conclusions, confirming the existence of the energy-information field of the person which had to make in the course of applying the method of bio-resonance therapy patented Method for the treatment of the family within 1.5 years.
5		These ideas have not received confirmation of the scientific community and are outside of science-based knowledge.	No	In recognition of the scientific community of ideas it is, in particular, the availability of publications, defended dissertations and patents, which describe these ideas (links on thus materials, namely a patents, listed in description on invention), namely: 1. Explanation of the physics of the process of the existence of energy-information field of biological object, see the patent of Russian Federation №2164424 from 27.03.2001 "An device for performing the method of low-frequency

1	2	3	4	5
				electromagnetic therapy", namely, "so that a living cell can be represented in the form of an oscillatory circuit with capacitance and resistance, the container (membrane) is determined by the free radical reactions and antioxidant defense system, and resistance - the enzymatic oxidation. The oscillating circuit has such a property as inductance - the ability to initiate an electric current in another circuit or closed conductor thanks to its magnetic moment. The generation of the electromagnetic field pulses from one to tens of Hz is a characteristic feature of the normal functioning of various human organs. In the form of an oscillatory circuit can imagine not only the cell, but also higher levels of organization of living matter: tissues and organs with different prevalence of glucose oxidation pathways, organ systems and whole organism as the induced resonant circuits equilibrium system. A organ such as the liver, contains a two ways of glucose oxidation in equal proportions, making it a key in the system of regulation of the capacitance and inductance of the body." 2. Patent of Russian Federation №2074748 "Device for energy impact on the biological object" contains the description of the use of the concept of the energy field of biological object and a method for evaluating the effectiveness of the device, which reliably to evaluate the impact on biological object impacting energy factors.
6	5	The application materials are not disclosed themselves harmful elements from which it is proposed to deliver the object,	No	Description of the concept of "harmful element" (including examples) given in the description on page 1 paragraph 4 "The harmful elements - it is any animate or...".
7		does not disclose specific actions at the specified redemption, the decisions	No	The PCT and the PCT Regulations not designated the concept of Method. In the Russian legislation (article 1350 item 1 part 4 of the Civil Code) Method (method) -

Number	Paragraph of Declaration	Grounds for the decision	The consent of the author	Explanation of disagreement
1	2	3	4	5
		taken and the data necessary for making these decisions in identifying and getting rid of harmful elements, etc.		is the process of affecting on a material object using material means. The list of actions (operations) of the patented method, a description thereof, the sequence of execution, data exchange between them are described on page 4 - 7 of descriptions of invention. Specifically, this sequence of actions (operations) can achieve the claimed technical result with using the method of bio-resonance therapy. These actions are performed on the material animate or inanimate nature object (for example, a human) with a help of material means - Technical part of the System (it is, in fact, the device, set of devices) and Information part of the System (it is, in fact, the software). Thus all the components of the method (method) are presented in the description. With regard to the decisions taken (when a concrete decision is made, under concrete values of concrete parameters), at page 6 paragraph 2 stated that every action (operation) include several strategies (algorithms) of decision, the choice of which during the operation depends on the current values of various parameters of state of these objects and for each object at different points in time may be different. Develop a list of such strategies (algorithms), their improvement, the responsibility for the effectiveness, the definition of the points of decision-making specialist (Object Manager) assigned to the Organizational part of the patent-pending Systems (item 6 on page 14). That is medical specialist in the field of bio-resonance therapy, possessing the skills of decision-making on the development of the List of activities for the treatment of, for example, a human in the application of Technical and Organizational parts of the patent-pending Systems within their competence on the basis of the description will implement the patented Method.

8		Also not specifically disclosed the claimed system of infected objects animate and inanimate nature	No	The PCT and the PCT Regulations not designated the concept of System. According to the Big Russian Encyclopedia, System - set of elements that are in relationships and connections with each other, which forms certain integrity, unity. On the page 8-17 of description of invention shows a list of elements, each of which is described, the relationship between them, and on page 14 paragraph 9 shows in what appears the integrity (unity) of the system. That is all elements of the system concepts are described. Specifically, in the described set the patent-pending system provides the claimed technical result. Detailing, improving patent-pending system is entrusted to it Provide part (items 2 and 3 on page 15). All the necessary and sufficient to achieve the said technical result in the patent claims to implement of parts of the System are reflected in the description and claims of the patent. That is the technical specialist in the field of instrumentation devices and testing of bio-resonance therapy can implement the Technical part patent-pending System, and the specialist in building management systems will be able to carry out patent-pending System in its in full.
9	6	In the description there is no theoretical and experimental studies of existence "energy- information field " and "information field" of human and the possibility of its registration. Besides, does not disclose the physical characteristics of these fields and how this field is manifested as a physical phenomenon. Not disclosed how can	Yes	But, and the claimed invention does not relate to the field of study (proof of existence) energy-information field. In item 4 above explained the context in which used the concept of "energy-information field." In item 5 above are links to the Russian Federation patents (these links are also in the description of the invention. The patented System and Method using these devices). In the description of these patents reflect this (requested) information.

1	2	3	4	5
		be measured characteristic of such a field, to assert the reality of existence.		
10	7	The description is not given any concrete example of embodiment of the claimed invention.	Yes	Partially specific exemplary embodiment is described in the Industrial applicability of description of invention. There is not specified in any embodiment of the patented Method and System able to achieve the described results, namely, "Patentable method and system have been applied to a child 11 months and both permanently residing with him his parents 35 and 38 years old in the next volume: 1. The method described on page 3 - 6, in its entirety, but with the performance of manual operations "Decision-making", "Definition of the object state parameters", "Control environment" and "Performance control". 2. The System as described on page 8-17 in full with the following limitations: 2.1. In the implementation of the Technical part of the System отсутствовали missing support blocks: the Block parameters of determining the state of the object, the Protective field generation block, the Self-control block, Block bindings to the animate or inanimate nature object, the Block account environmental factors, the Block indication and management. The functionality of the Protective field generation block provides a device for the energy impact on the biological object (Patent of Russian Federation №2074748). The functionality of the other missing block was обеспечена secured by hand. The remaining blocks are connected information and constructively in a single device. Together with this device, by emulating the function of the additional generators of Therapeutic block used 2 devices for carrying out the method of low-frequency electromagnetic therapy (patent of Russian Federation №2164424). Information link between this 2 devices and the main device has been implemented manually. The Block detection of harmful elements implemented with the 2-nd version of the

1	2	3	4	5
				algorithm described on page 11 of description of invention. Comparing the response data with data of harmful elements done manually, as the storing information on the harmful elements has not been implemented in the Information storage block. 2.2. The Organizational part was implemented in the form of a continuous visual and evaluation (patient answers to questions) monitoring the state of the treated objects. 2.3. The Information part has been implemented in the form of an software for implementing the automation of operations "Defining a list of harmful elements", "Detection of harmful elements", "Impact of". Due to the fact that the database was not ready at the time of the test, the data saved in a structured text. 2.4. Provides part was realized by minimizing the contact of treated objects with the outside world.
11		Accordingly, it is not possible to understand from any harmful elements is expected to deliver the said object	No	As explained above item 6, where in the description of invention, you can read and understand what is harmful element.
12		by what actions and what specific tools	No	Listed in item 7, and item 8 above
